

The figure is a line plot with 'time (wall clock seconds)' on the x-axis and 'value of the objective function' on the y-axis. The x-axis ranges from 2.325 to 2.375 with major ticks every 0.005 units. The y-axis ranges from -70 to -10 with major ticks every 10 units. The plot shows a single data series represented by a blue line with '+' markers. The series is constant at approximately -70 for most of the time range, except for a very narrow vertical spike at approximately 2.35 seconds, where it reaches a value of about -15.

time (wall clock seconds)	value of the objective function
2.325	-70
2.330	-70
2.335	-70
2.340	-70
2.345	-70
2.350	-15
2.355	-70
2.360	-70
2.365	-70
2.370	-70
2.375	-70
