

The plot displays a single vertical line of data points at approximately 1.51 seconds. The y-axis, labeled 'value of the objective function', ranges from -80 to -20. The x-axis, labeled 'time (wall clock seconds)', ranges from 1.49 to 1.53. The data points are represented by purple '+' markers.

| time (wall clock seconds) | value of the objective function |
|---------------------------|---------------------------------|
| 1.5100                    | -76                             |
| 1.5101                    | -74                             |
| 1.5102                    | -73                             |
| 1.5103                    | -72                             |
| 1.5104                    | -71                             |
| 1.5105                    | -69                             |
| 1.5106                    | -64                             |
| 1.5107                    | -59                             |
| 1.5108                    | -55                             |
| 1.5109                    | -45                             |
| 1.5110                    | -39                             |
| 1.5111                    | -26                             |
